

proj03: Guessing Game

Specification:

Generate a random number between 1 and 9 (including 1 and 9).

Ask the user to guess the number, then tell them whether they guessed too low, too high, or exactly right.

Keep the game going until the user types “exit.”

Keep track of how many guesses the user has taken, and when the game ends, print this out.

Extension:

Limit the number of guesses that the user can make.

Hint:

To generate a random number, you will need to use someone else’s code. You can access others’ in modules. We will use the random module. To do this, as the top of your code, type “import random.”

To generate the random integer, type something like:

```
variable_name = random.randint(2,6)
```

This sets the variable called “variable_name” to a random integer that is greater than or equal to 2 and less than or equal to 6.
